## 1 题目 1：超球体积计算

### 1.1 题目描述

The interior of a  $d$ -dimensional hypersphere of unit radius is defined by the condition  $x_1^2 + x_2^2 + \cdots + x_d^2 \leq 1$ . Write a program that finds the volume of a hypersphere using a Monte Carlo method. Test your program for  $d = 2$  and  $d = 3$  and then calculate the volume for  $d = 4$  and  $d = 5$ , compare your results with the exact results.

## 2 题目 2：海森堡模型

### 2.1 题目描述

Write a MC code for a 3D Face-Centered Cubic lattice using the Heisenberg spin model (adopt periodic boundary condition). Estimate the ferromagnetic Curie temperature.

$$H = -J \sum_{\langle i,j \rangle} \vec{S}_i \cdot \vec{S}_j, \quad J = 1, \quad |\vec{S}_i| = 1$$
